

1. I want this website to look modern and clean. I liked the look of something really simple but classy and professional. To achieve this tone, I have a large picture of an navy blue painted wall with silver, white, and grey tones which was the inspiration for my color scheme. These colors are very calm and the silver I believe gives the modern feel, because it's a very classy and fancy color. I think this is the best way to achieve this tone, because when I looked at other modern websites, they have dark colors (like navy blue, grey, or dark green) and it's usually complemented with whites and silvers. The picture is a good way to convey this tone too, because the picture itself is modern.
